build faster with secure,
drop-in authentication.

Build Secure Apps Faster with Authgear

Overview

Authgear is a leading authentication platform designed to simplify and secure user identity management across web, mobile, and legacy applications. As a crucial component in a microservice architecture, Authgear provides a unified authentication layer that seamlessly integrates with various services, enabling consistent and secure access control throughout distributed systems. Whether your infrastructure is monolithic or microservice-based, Authgear offers the flexibility, scalability, and security needed to manage user identities in a rapidly evolving digital landscape.

Outstanding Features

- **Universal Authentication**
Authgear supports a wide range of authentication methods, including social logins, single sign-on (SSO), multi-factor authentication (MFA), and passwordless authentication, catering to diverse user preferences.
- **OIDC and SAML Compatible**
Authgear is built on top of industry standards like OAuth 2.0, OIDC and SAML, ensuring secure and reliable authentication for both first-party and third-party applications.
- **Single Sign-On (SSO)**
Simplify the user experience by enabling SSO across multiple applications, allowing users to authenticate once and gain access to all connected services.
- **Multi-Factor Authentication (MFA)**
Enhance security with MFA, which adds an extra layer of protection by requiring users to verify their identity through additional factors such as SMS, email, or authenticator apps.
- **Customizable Authentication Flows**
Tailor authentication processes to meet specific business needs, including custom login pages, progressive profiling, and user consent management.
- **User Management**
Complete admin portal for managing users, with audit log and analytics dashboard.
- **Attack Protection**
Real-time protection against fraud, bot and brute-force attacks.

Outback Steakhouse Streamlines Membership Access with Authgear Passwordless

75%

reduction in duplicate user accounts

97%

reduction of login friction

Client Background & Challenge

Outback Steakhouse, an Australian-inspired restaurant brand with 10+ locations across Hong Kong, runs a popular iOS and Android membership app where diners unlock discounts, collect points, and redeem rewards.

However, their legacy authentication setup created friction and operational headaches:

- **Email & password fatigue**
Infrequent logins meant customers often forgot passwords, spiking reset requests and churn during promos.
- **Account duplication**
Users could not upgrade tiers with the same email, forcing new registrations. Many ended up with multiple accounts (e.g., one “basic,” one “upgrade”) and confusion about which to use.
- **Promo-time pressure**
High traffic during campaigns stressed the login flow, causing drop-offs right when demand was highest.

Solution

To modernize access and reduce friction, Outback adopted Authgear:

- **Passwordless SMS Login**
Implemented one-tap, code-based authentication via SMS. Users sign in with their phone number, without remembering passwords, keeping promo-period conversions high.
- **Duplicate Prevention & Account Unification**
Consolidated identities around verified phone numbers and implemented account linking/merging rules. Returning users are recognized and guided to the right account; conflicted profiles are merged to a single source of truth.

Key Benefits

- **Cleaner CRM**
A 75% reduction in duplicated accounts, simplifying support and loyalty operations
- **Happier Members**
97% reduction in login friction, most users authenticate with a single tap..
- **Seamless Onboarding During Peaks**
Authgear's scalable, event-safe OTP delivery and rate-limiting ensure reliable logins during marketing spikes without degrading user experience.
- **Upgrade Path Without Re-registration**
Enabled tier upgrades on the same identity. Users keep their history, points, and entitlements, no new email or fresh account required.
- **Fraud & Abuse Controls**
Built-in anomaly detection (e.g., OTP throttling, device and IP signals) reduces credential-stuffing risks and promo abuse while keeping the flow simple for legitimate diners.
- **Lower Support Burden**
Fewer password resets and "which account is mine?" tickets free up staff time.

integrated with Authgear

80%

reduction in password recovery
requests

Client Background & Challenge

Bupa is a leading international healthcare group, providing health insurance and healthcare services to millions of customers worldwide.

Bupa faced several challenges with their existing authentication system:

- **Infrequent app usage**
Due to the nature of insurance, users typically accessed the apps only once or twice a year.
- **Complex password requirements**
The cybersecurity team mandated complex passwords for security reasons.
- **High rate of forgotten passwords**
Infrequent use combined with complex passwords led to many users forgetting their login credentials.
- **Limited biometric support**
Their existing Azure AD B2C solution didn't fully support biometric login capabilities.

These issues resulted in a poor user experience, increased support calls for password resets, and potential user frustration.

Solution

Authgear was introduced to address Bupa's authentication challenges:

- **Biometric Authentication Integration**

Authgear's robust biometric login support was implemented, allowing users to easily and securely access their accounts using fingerprint or facial recognition.

- **Seamless Integration with AD B2C**

We facilitated a smooth transition from Azure AD B2C to Authgear, ensuring no disruption to user accounts or data.

- **Enhanced Security with User-Friendly Access**

While maintaining high security standards, the biometric option provided a user-friendly alternative to complex passwords for frequent access.

Key Benefits

- **Easy Access**

Biometric login solved the issue of forgotten complex passwords for infrequent users.

- **Enhanced Security**

Biometrics provided a secure alternative to passwords, meeting cybersecurity team requirements.

- **Improved User Experience**

Quick and easy login increased user satisfaction and engagement.

- **Reduced Support Costs**

Fewer password reset requests led to decreased support team workload.

- **Future-Proof Solution**

Authgear's flexible platform allows for easy updates and additions of new authentication methods.

Client Background & Challenge

K11 / New World is a prominent company in the retail and property development sector, known for its innovative approach to blending art, culture, and commerce.

K11 / New World faced several challenges with their existing authentication system:

- Lack of standardization across different applications
- An unusual login flow that didn't fit standard authentication solutions
- Need for Single Sign-On (SSO) capability across various applications
- Desire for a custom UI that could provide a native-like experience within their mobile app

Solution

Our company provided a comprehensive authentication solution that addressed all of K11 / New World's unique requirements:

1. Standardized Login System

We implemented a unified authentication system that could be used across all of K11 / New World's applications, providing a consistent user experience and simplifying backend management.

2. Support for Unusual Login Flow

Our flexible authentication framework was able to accommodate K11 / New World's non-standard login process, ensuring that their unique requirements were met without compromising security or user experience.

3. Single Sign-On (SSO) Implementation

We integrated SSO functionality, allowing users to access multiple K11 / New World applications with a single set of credentials, enhancing user convenience and reducing friction.

4. Custom UI with Native-like Experience

Our solution supported custom UI development, enabling K11 / New World to create an embedded web view flow within their mobile apps that closely mimicked a native experience. This maintained brand consistency and met user expectations for a smooth, app-like interface.

10+

systems integrated with Authgear

5x

faster integration of new Identity and Access Management features

Client Background & Challenge

Our client is one of the largest Food & Beverage (F&B) companies in the world, with a significant number of frontline staff across various locations globally.

One of the local chapters faced a complex challenge in updating their employee authentication system:

- **Increased Global Security Standards**

The global corporate office mandated enhanced security measures, including Two-Factor Authentication (2FA) for all employee applications.

- **Diverse Workforce**

A large portion of their workforce consists of frontline staff, many of whom are not tech-savvy.

- **User Experience Concerns**

The local chapter worried that complex security measures might hinder productivity and increase frustration among frontline workers.

- **Support Burden**

There was a need to minimize the internal IT support required for login-related issues.

- **Multiple Applications**

There was a need to minimize the internal IT support required for login-related issues.

Solution

We implemented a comprehensive authentication solution that addressed both the global security requirements and local usability concerns:

- **Two-Factor Authentication (2FA)**
Implemented 2FA to meet the global security standards, with multiple options for the second factor to suit different user preferences and device capabilities.
- **Single Sign-On (SSO)**
Integrated SSO functionality across all employee applications, reducing the number of times staff need to log in during their workday.
- **Biometric Login**
Implemented biometric authentication (fingerprint and facial recognition) as one of the 2FA options, providing a quick and easy way for frontline staff to securely access their applications.
- **User-Friendly Interface**
Designed an intuitive, easy-to-navigate interface that guides users through the login process, with clear instructions for setting up and using 2FA.
- **App-to-Web SSO**
Unify web-based employee applications into one intuitive mobile super-app with frictionless access.

Key Benefits

- **Compliance**
Met global security standards while providing a flexible, user-friendly solution.
- **Improved Efficiency**
SSO and biometric login reduced time spent on authentication processes.
- **Reduced Support Burden**
Intuitive design and biometric options led to fewer support requests.
- **Enhanced User Adoption**
Easy-to-use system encouraged greater use of digital tools by frontline staff.
- **Scalability**
Solution designed to easily accommodate future security enhancements and new applications.

MTR Corporation Simplifies Part-Time Hiring Login

Reduction in messaging cost by using WhatsApp OTP

1800+

employees onboarded to Authgear Workforce Identity

90%

reduction in time to fill a work duty

Client Background & Challenge

MTR Corporation operates Hong Kong's mass transit railway network and related transport services. The company is committed to operational excellence and leverages digital platforms to improve recruitment, scheduling, and frontline workforce management.

They faced several authentication challenges:

- **Diverse User Base**

The system needed to accommodate two distinct user groups - station managers and part-time staff- each requiring different authentication methods.

- **Ease of Access for Part-time Staff**

The authentication method for part-time staff needed to be secure yet simple, considering the diverse tech-savviness of potential candidates.

- **Integration with Existing Systems**

For station managers, the new authentication system needed to integrate seamlessly with MTR's existing IT infrastructure.

Solution

We implemented a comprehensive authentication solution that addressed MTR's specific needs:

- **Dual Authentication System**

We developed a dual authentication approach to cater to the different user groups. This system allowed for appropriate security levels for each user type while maintaining ease of use. The dual approach ensured that both internal staff and external users could access the system securely, with methods tailored to their specific needs and access requirements.

- **Azure AD Integration for Station Managers**

For MTR's station managers, we implemented Azure Active Directory (AD) authentication. This integration allowed managers to use their existing MTR corporate credentials to access the platform securely. By leveraging Azure AD, we ensured single sign-on capabilities, multi-factor authentication, and compliance with MTR's existing security policies. This approach also simplified account management and enhanced overall security for these users with elevated access rights.

- **WhatsApp OTP for Part-time Staff**

For part-time staff, we implemented a WhatsApp One-Time Password (OTP) authentication system. The OTP system ensured security while eliminating the need for users to remember complex passwords. It also facilitated easy mobile access, as most of the communications between the part time staff and station managers are on WhatsApp.

Key Benefits

- **Enhanced Security**

Azure AD integration for station managers ensured high-level security, including features like multi-factor authentication and single sign-on.

- **User-Friendly Authentication**

WhatsApp OTP login provided a secure yet convenient authentication method for part-time staff, increasing user adoption and reducing login-related support issues.

- **Reduced Administrative Overhead**

The WhatsApp OTP system eliminated the need for password management for part-time staff.

- **Compliance**

The robust authentication methods helped MTR meet regulatory requirements for data protection and access control.

7 Days

to get Authgear platform
integrated and running

3000+

users across over 30 partner
agencies

Hongkong Land, Landmark Atrium. <https://www.hkland.com/en/media/media-library>

Client Background & Challenge

Hongkong Land, a major property investment, management, and development group. During the start of their digital transformation journey, their IT faced a complex challenge in upgrading their authentication system for internal staff and partner agents.

The key issues included:

- **Diverse User Base**
The system needed to accommodate both internal staff and external partner agents, each requiring different authentication methods.
- **Security Compliance**
The company faced stringent and complex security requirements mandated at the group level. These requirements typically necessitated a 3-6 month implementation period, which was not ideal for the company's operational timeline.
- **User Experience**
The solution needed to be user-friendly to ensure adoption and reduce friction in daily operations.
- **Mobile Access**
With an increasing need for mobile access to property information, a secure mobile authentication solution was crucial.
- **Administrative Overhead**
The existing system required significant IT resources for user management and support.

Solution

We implemented a comprehensive authentication solution that addressed Hongkong Land's specific needs:

- **Integrated Authentication System**

We developed a dual-approach authentication system to cater to different user groups. For Hongkong Land's internal staff, we implemented ADFS integration, allowing them to use their existing corporate credentials seamlessly. For partner agents, we created a separate login system using email and password, enhanced with Two-Factor Authentication (2FA) for added security. This approach ensured that both internal and external users could access the system securely, with methods tailored to their specific needs.

- **Complex Password Policy**

We implemented a robust and complex password policy to ensure high security standards across all user accounts. This included features such as mandatory password changes every 90 days and a requirement that new passwords cannot match any of the previous 11 passwords used. These measures helped to maintain a high level of security while complying with group-level requirements, significantly reducing the risk of unauthorized access due to compromised passwords.

- **Biometric Authentication**

To enhance user experience and security, especially for mobile users, we integrated biometric authentication capabilities. This feature allows both internal staff and partner agents to use fingerprint or facial recognition for quick and secure access to the system on their mobile devices. The implementation of biometrics not only improved security but also significantly streamlined the login process for users under complex password policy.

- **User Management System**

To streamline user management and reduce administrative overhead, we integrated the Authgear Admin API. This powerful tool allows IT administrators to efficiently manage user accounts, permissions, and authentication settings. The API integration significantly reduced the time and resources required for user management tasks, freeing up IT staff to focus on more strategic initiatives.

Key Benefits

- **Enhanced Security**

Met stringent group-level security requirements through the implementation of zero trust authentication and complex password policies.

- **Improved Efficiency**

Reduced the typical 3-6 month security implementation timeline to just weeks, allowing for faster deployment and adoption.

- **User-Friendly Access**

Biometric authentication and tailored login methods for different user groups improved the overall user experience.

- **Flexible Authentication**

Successfully accommodated both internal staff (via ADFS) and external agents (via email/password with 2FA) within a single system.

- **Reduced Administrative Burden**

The Authgear Admin API streamlined user management processes, freeing up IT resources.

- **Mobile-Ready**

Biometric authentication made secure mobile access to property information quick and easy for all users.

- **Scalability**

The solution was designed to easily accommodate future security enhancements and integration with additional systems.
